2005- up Mustang Performance Air Suspension System

Not just a replacement strut.... The new Ridetech monotube performance Airstruts are designed with handling performance and ride quality in mind. Utilizing a custom made extruded aluminum clamp mount that integrates abs and brake lines, installing the strut is a true bolt-on affair. Available in a CoilOver or ShockWave configuration and several shock valving options, Ridetech gives you the options to tune your musclecar to your preferred driving style and stance.

In addition to the new front AirStrut, Ridetech has also developed a rear ShockWave conversion system that is a direct bolt in system for your mustang.

The RidePRO e3 system includes everything needed to complete the air suspension system. 3 programmable presets for easy 1 button adjustment.
